## V<sup>e</sup>REVIEW 3.0™

---

### On-line Review Platform

Utilizing Thunderstone's Taxis technology to maximize the speed, efficiency and ease of use, V<sup>e</sup>REVIEW 3.0 is a state of the art application that allows unlimited reviewers from around the globe to view, categorize, tag, label, redact, and reduce to TIFF documents all from a single window.

Operating in single window environment, reviewers can search, view, code, and ready production documents (including metadata) in single page, multi-page, HTML, text, native or TIFF format without the need to leave the designated window or incur costly conversions to image type files.

In addition, V<sup>e</sup>REVIEW 3.0 has incorporated a Case Management portal and extensive system administration features.

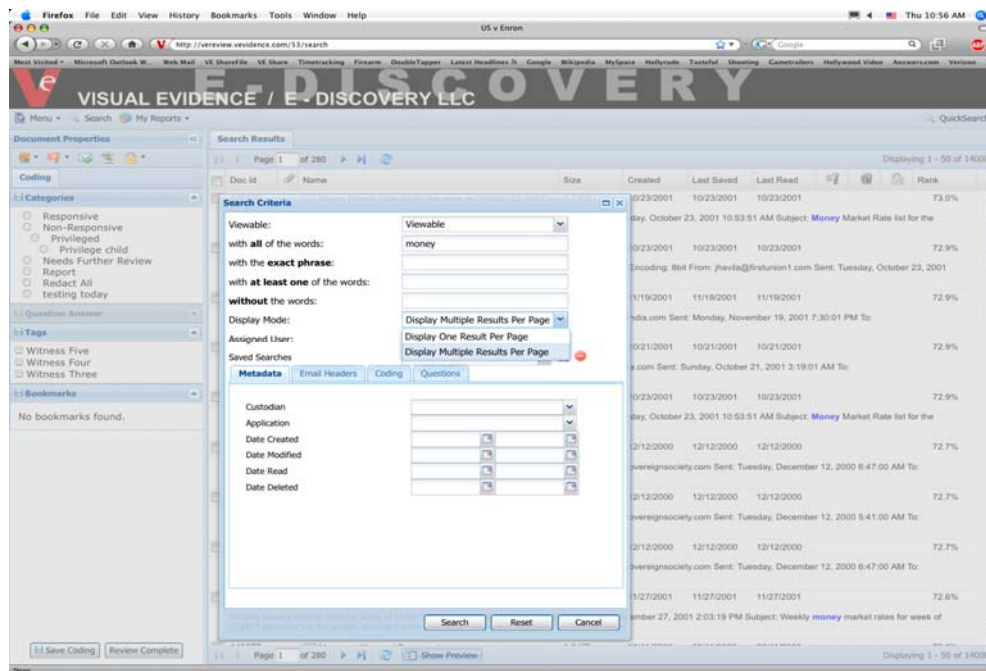

Clients now have the ability to utilize and manage their case through a document depository, internal e-mailing center and a case calendar. In addition, clients have access to 24/7 reporting center that tracks both the reviewers activities as well as the status of the entire case review.

As a system administrator, clients have the ability to create coding categories, create a document Q&A area, create labels or tags, control reviewer rights, and delegate document distribution.

The V<sup>e</sup>REVIEW 3.0 Q-Manager™ module enables documents to be assigned to reviewers using a variety of criteria. In addition, the Q-Manager™ assists with workflow auditing by classifying the review level that documents have passed. This gated auditing system ensures that each document has passed through the audits designed by the review team prior to production.

Finally, V<sup>e</sup>REVIEW 3.0 file conversion, file redaction, document endorsement, rolling production control and automated privilege log generation are all capable with Visual Evidence's review platform.

## Features of V<sup>e</sup>REVIEW 3.0™

- ✓ Case Management Portal™ includes message center, case calendar, and case library
- ✓ No individual seat licensing
- ✓ Single window review simplifies and accelerates the review process
- ✓ Metadata, text, HTML, PDF/TIFF and production view panes
- ✓ Case Management Portal™ authorizes the case administrator to determine the site interface, coding capabilities, reviewer rights and document distribution
- ✓ Q-Manager™ enables the case administrator to dictate the document distribution to reviewers
- ✓ Global access, 24/7 web-enabled review from any location without software download
- ✓ On demand reporting (12 individualized reports) allows the case administrator to audit and track the case review status and reviewers' aptitude
- ✓ Incorporates native documents and imaged documents
- ✓ Boolean and concept-based searching
- ✓ Multilingual and thesaurus reference library
- ✓ TIFF and redact "on the fly"
- ✓ Batch print from reviewer location
- ✓ Query browser to allow client audit of productions
- ✓ E-mail threading and batch coding capabilities
